**Special Notice** It is well to remember that at all points on the Pennsylvania Railroad system, where packages are left on hand uncalled for a period of over 24 hours, **the railroad company exacts a charge of 5c. per package** for each day or fraction thereof over the above-mentioned time.

## ANNOUNCEMENT.

On December 1st, 1908, we opened (in addition to our present building) our new establishment, "Tower Hall" Building, 518 Market Street. We think (and have been told) that we now have the finest equipped, as well as most conveniently located, seed house to be found anywhere.

Realizing that we could no longer handle our entire large business under the 1018 Market Street roof, and finding it impossible to add any further additions to that building, we acquired the entire building known to everyone who has visited Philadelphia as "TOWER HALL," at 518 Market Street (just below Sixth Street).

The building, with a solid granite front, has a width of 23 feet on Market Street and 47 feet on Ludlow Street, and is 180 feet deep.

Since acquiring this building we have remodeled it with two large, new show windows; entire new oak compartments for Flower, Vegetable and Grass seeds; a new hardwood floor; concrete basement floor; an electric passenger elevator and two electric freight elevators; steam heating, electric lighting, plumbing, etc. All these improvements will facilitate quick shipments, accuracy in the filling of orders, etc., besides conveniences for our customers and employees.

For some years it has been necessary (despite the large storage facilities we had in the entire building at 1018 Market Street), to seek storage outside. This frequently meant delays of various kinds. Now that we have in our two buildings a combined storage area of about 59,000 square feet, we feel that we shall be able to accommodate all the goods that it is necessary for us to carry in stock to supply the demands made on us by a constantly growing business.

### **OUR FLOWER AND VEGETABLE SEED BUSINESS**

is very large, and caters especially to the private gardener, florist and kitchen garden trade.

### **OUR ANNUAL GRASS SEED BUSINESS**

necessitates storage room for about 10 car loads (about 350,000 lbs.).

### **OUR ANNUAL BUSINESS OF OVER FIVE MILLION BULBS**

requires storage room for about 4000 cases which would aggregate in weight about 37 carloads.

### **OUR PLANT DEPARTMENT**

is managed by a man of many years' experience in greenhouse, garden and nursery work.

### **OUR POULTRY SUPPLIES DEPARTMENT**

is under the care of a long experienced, practical poultryman, and is up-to-date in every detail.

### **OUR GARDEN TOOL AND IMPLEMENT DEPARTMENT**

is acknowledged to be probably the largest of its kind, and the assortment of goods is hard to duplicate elsewhere.

The "Tower Hall" establishment is under the management of MR. FRED'K J. MICHELL, personally, and all customers may be assured of prompt and courteous attention to their wants.

*All Executive Offices will be retained at 1018 Market Street,* and we request that all communications be addressed there, although we will have, through our excellent telephone service, direct connection with "Tower Hall."

We take this opportunity to thank our many customers who have patronized us in the past, and have thus assisted us in building up our large business.

It will give us extreme pleasure to see all customers and friends at our new establishment, 518 Market Street (below Sixth Street). There is a subway exit three doors from 518. Customers who happen to be south of Market Street will find it convenient to use our entrance on Ludlow Street (half a block above Chestnut Street).

Very respectfully,

**HENRY F. MICHELL CO.**

## MICHELL'S SPECIALTIES IN VEGETABLE SEEDS

Everyone engaged in gardening is ever welcoming the improved type of various vegetables ; the private gardener especially is in quest of them. In order to satisfy the demand we have had the growers of our various vegetable seeds *make special selections*, from which extra good results can be expected. There has been very little advance in price of these over the regular strains (just enough to cover the cost of extra attention). We feel sure that our customers will like this new departure in our catalogue, and by ordering the improved strains their garden will be more bounteous and successful than ever.

### GRASS SEED MIXTURES

There is nothing more essential to the well appearance of any place (whether it be a small city residence or a spacious country estate) than a well-established and kept lawn. Michell's Grass Seed Mixtures for lawns, pleasure grounds and fields are proven annually by thousands to be the very best obtainable. Last year our grass seed sales exceeded 250,000 pounds. This year they will be much larger. It might be well to compare our prices with those of other houses, who claim to give quality and at the same time charge top-notch prices. # Opinions of Practical Gardeners, Farmers, Truckers and Florists on "POUDRETTE."

**POUDRETTE** a fine Fertilizer for corn.

Poudrette has been my favorite fertilizer for the past season, as I have used it on all crops, and can well recommend it for growing corn, and have had excellent crops by using it.

Respectfully yours,

SAM'L P. MYERS,  
South Vineland, N. J.

You can save much money by using POUDRETTE.

The best cheap Fertilizer.

**Myers & Bow-**

We used your Poudrette last year with great success. For a truck manure we have not found any fertilizer to surpass it, and we also used it extensively on field corn with good results this year.

Very respectfully,

MYERS & BOWMAN,  
Bristol, Pa.

**POUDRETTE** grows strong, vigorous plants. Good all-round fertilizer.

We have used your Poudrette for the last fifteen years. There is no other fertilizer on the market that gives as good results in growing young plants. We grow hundreds of thousands of vegetable plants every year and use no other fertilizer but Poudrette in my cold frames and seed beds; You can scatter it freely among your tender plants without any danger of burning them. We raise thousands of Daisies and Pansies, and find the use of Poudrette gives us strong, vigorous plants, and large flowers. We recommend it to all who want a cool and rich food in growing violets, carnations and roses. We have also used it successfully in growing peppers, corn, lima beans, and cabbage. We particularly recommend it in growing peas, sweet potatoes, salads, radishes and beets. It will be found very good in the spring as a top dressing for asparagus and strawberries. We have tried it on carrots, parsnips, squash, cucumbers and melons. Never found any fertilizer to equal it in raising those crops; in fact, it is a good all-around fertilizer for those who need a good, rich plant food.

Respectfully,  
F. LLEWELLYN OWEN.

*What the practical Farmer and Trucker of the House of Correction says of POUDRETTE.*

I am now using Poudrette on all kinds of truck. I find that it grows all kinds of vegetables, which I grow quicker than by manure or any other gilt-edge fertilizers on the market, as it acts much quicker and lasts longer in the ground to grow the second crop, and I find by using it on poor ground that I raised a good crop of corn this year, and I believe it will enrich ground faster than manure or other fertilizers that I have ever tried

I can also say that it has no peer to grow grass or corn, the crop stands the drought much better than where I used manure side by side. All the above remarks I respectfully submit.

JOHN SHISLER,  
Farmer, House of Correction, Holmesburg, Philadelphia.

**POUDRETTE** Should be Used by Every Market Gardener, Private Gardener, Farmer and Florist.

**POUDRETTE** applied as top dressing on your LAWN and PASTURE, will make and keep the GRASS a BEAUTIFUL EMERALD GREEN COLOR.

# Why We Can Furnish Superior Hatching Eggs

1. We have 250 acres of fertile land given up to White Leghorns.
2. We have devoted ourselves primarily to the production of healthy, vigorous stock, raised and kept on unlimited clover range, thus insuring strong-germed eggs that will hatch lusty chicks, with the right to live, and grow fast.
3. By a system of the most painstaking breeding, and ruthless culling we have succeeded in developing with the prepotency and other desirable qualities of the thoroughbred, the rugged constitution of the common barn-yard fowl.
4. Our strain of White Leghorns is the most useful variety of chickens to be had, for the suburbanite, the farmer, the trucker, or the professional poultryman, whether for eggs, broilers, or medium sized roasters.

# The Home Garden

By EBEN E. REXFORD

*Author of "Four Seasons in the Garden."*

THIS book is not a scientific treatise on gardening. It is intended for the use of those who have a little piece of land upon which they would like to grow vegetables and small fruits, but whose knowledge how to go to work in the right way, and what to attempt growing, is limited, because of lack of experience along this line. It is written for the man who would like to find in outdoor exercise a relaxation from the cares of professional life, and would like to have that exercise one in which pleasure and profit can be successfully combined. It contains no theories. It aims to give simply and clearly such information as the writer has gathered from his own experience in gardening, by which he believes others can bring about equally satisfactory results.

In brief, it is a practical book by a successful amateur gardener for other amateur gardeners who would like to be successful in growing things to the best possible advantage *without making a business of it.*

Eight full-page illustrations. 12mo. Over 200 pages.

# Four Seasons in the Garden

By EBEN E. REXFORD

A BOOK on gardening for the home-maker by the foremost amateur gardener of the United States. It treats of all phases of the subject, from the simple bed or two along the fence, in a city back yard, to the most ambitious garden the happy suburbanite or country dweller can manage without the services of a professional.

The growing of house plants and the use of plants for household and table decoration are thoroughly described, and a couple of chapters on rural and village improvement carry the home-gardening plan into the larger field of community work.

“It contains clear and definite instruction.”

Twenty-seven illustrations in tint. Colored frontispiece. Decorated title-page and lining-papers. 12mo. Cloth, \$1.50 net.

# The Small Country Place

By SAMUEL T. MAYNARD

*Author of "Landscape Gardening as Applied to Home Decoration," etc.*

THIS BOOK, which was written by a man who has spent more than thirty years teaching botany and horticulture, is thoroughly practical, and will be of great value to those who live upon small country places, especially those whose work in the city allows them but a few hours each day to spend about the home.

The author discusses the growing of farm and garden crops, the care of the horse, the cow, poultry, and bees, and similar subjects.

It is a work that should be in the hands of every one who owns or rents a bit of land in the country or suburbs, and the large farmer will even find in it many suggestions that will be of material aid to him.

There are a great many illustrations showing plans of orchards, vegetable and flower gardens, lawns, roads, walks, etc.

Seventy-five illustrations from photographs, and numerous line drawings. 12mo. Cloth, \$1.50 net. Post-paid, \$1.65.

To store for winter use select well-drained ground, dig trenches one foot wide and deep enough to cover tops of plants. Lettuce is now sown during most all seasons of the year. For outdoor use the seed can be sown in well-manured hotbeds in February and March. Transplant there or outdoors when the weather will permit, in rows about twelve inches apart, ten inches apart in the row. If the salad is not to head, sow thickly and cut as desired. For best results it is well to sow only the varieties best suited to the different seasons and conditions. For winter use sow the seed in September in hotbeds and follow it up with other sowings for a succession.

# Target-ology

*Being a few Simple Rules  
for the spraying of  
Fruit Trees and Field Crops.*

---

HENRY F. MICHELL COMPANY,  
1018 Market Street,  
Philadelphia, Pa.

## **TARGET-OLOGY**

---

### **In the Fall.**

Take as an "average tree" one about 15 feet high with a spread of branches about 10 feet in every direction from the trunk. Estimate as carefully as possible how many such "average trees" will be equivalent to the orchard you plan to spray.

For each twenty of such "average trees" purchase 1 gallon of Target Brand Scale Destroyer. Then, just as soon as the leaves drop from the trees in the Fall, dilute this gallon with 19 gallons of water and apply to the trees with a good spray pump, one gallon of the diluted spray to each "average tree".

### **In the Winter.**

If you did not get through with the spraying in the Fall the same process may be employed during the Winter—provided always that the application is made when the temperature is above freezing. A frost several hours after the spraying has been completed will not be injurious but it must not occur during the application or too soon afterward.

### **In the Spring.**

Before the buds open, apply to each "average tree" one gallon of diluted spray made from Target Brand Scale Destroyer, unless this application has already been made in the Fall or Winter.

With Apple Trees, immediately after the blossoms fall apply to each "average tree" one gallon of spray material made by dissolving in thirty

gallons of water five pounds of Blue Arsenate. This will kill the apple worms (Codling Moth) and help to check the blight (fungus).

### **In the Summer.**

One month after the blossoms have fallen, and again one month later, apply a dilution made from one bag of Target Brand Quick Bordeaux in 50 gallons of water, so as to control the fungus and prevent withering and falling of the foliage and fruit.

In July the second brood of worms may appear, requiring the addition of  $1\frac{1}{2}$  lbs. of Arsenate of Lead to the 50 gallons of Quick Bordeaux; or Blue Arsenate may be used in place of both.

Potatoes and Field Crops should receive per acre about 50 gallons of diluted spray, made from Blue Arsenate, applied when the bugs appear. As often as practicable thereafter (seven times in the season is best) spray with 50 gallons of Quick Bordeaux per acre. This will cause the vines to remain green so that every potato in the hill will develop. An increase in yield of from 50 to 100 per cent may be expected.

**TARGET BRAND SCALE DESTROYER** costs \* per quart 35c;  $\frac{1}{2}$  gallon 65c; 1 gallon \$1.00; 5 gal. \$3.75; 10 gal. \$7.50; Half-barrels 55c per gallon; Barrels 50c per gallon.

**OUR OWN BRAND BLUE ARSENATE** costs per 2 lb. can 60c; 5 lb. can \$1.00; 10 lb. can \$1.75; 25 lb. keg \$4.00.

**TARGET BRAND QUICK BORDEAUX** costs per 10 lb. bag 70c.

**UNSPRAYED**

Showing results obtained by following the few simple rules of Target-ology.

**SPRAYED**

**Michell's Number One.** This lettuce is a positive header under the most trying conditions. It is tender, of a decided buttery flavor, and immensely large. A valuable type for hot weather; also desirable for autumn use. We have known instances where this lettuce brought twice the price of other sorts. Pkt. 10c., 15c. per  $\frac{1}{2}$  oz., per oz. 30c., \$1.00 per  $\frac{1}{4}$  lb., per lb. \$3.00.

## LETTUCE—Continued

**Early Cabbage or White Butter.** A wonderful producer of the largest sized heads; while an older variety, it still is in the lead. Excellent to sow in hotbeds for early spring use, while it may be used continuously until autumn. Color a light green with a rich delicate interior, very hardy. Pkt. 5c. and 10c., 15c. per oz.,  $\frac{1}{4}$  lb. 40c., \$1.40 per lb.

**Emperor Forcing.** For sowing in greenhouses or in hotbeds for forcing purposes this variety is in the lead. The head it produces is not large but very solid. It does not make a suitable head outdoors, and other varieties should be used for this. Color light green, heart tender and buttery. **MUSK MELON OR CANTALOUE**

Melone (Ger.)

Melon Muscade (Fr.)

**NOTE.**—The Cantaloupe Crop was seriously affected in many ways the past season and the price of seed is somewhat higher than usual.

**One ounce for seventy-five hills; two and a half pounds to the acre.**

A rich, sandy soil is the best for the cantaloupe. Plant the seed when the ground is warm, from six to twelve seeds in hills six feet apart each way; when about three inches high thin out to leave three vigorous plants in a hill. When the shoots are a foot long pinch off the tips to branch and strengthen the vine. Thin out the fruit if it is excessive. Never plant near cucumbers, squash or other vine seeds, as the bees might hybridize the blossom and cause the fruit to take on the flavor of the former.

**Burrell Gem.** This might be called an improved Rockyford, except that the flesh is a golden or orange yellow. It is very meaty and has few seeds. The melon is oval in shape and very prolific; it is probably the best keeper in the cantaloupe line. Pkt. 10c., 15c. per  $\frac{1}{2}$  oz., 1 oz. 30c., \$1.00 per  $\frac{1}{4}$  lb., 1 lb. \$3.75.

*Musk Melon—Emerald Gem*

Wasser Melone **WATER MELON** Melon D' Eau  
(Ger.) (Fr.)

Water melons require very much the same treatment as cantaloupes. Plant in hills eight or ten feet apart each way. To get large fruit, leave but one or two on a vine.

**Cuban Queen.** A striped and mottled variety, with a thin rind; the flesh is sweet, bright red, very solid; it attains a mammoth size. Pkt. 5c., oz. 10c.,  $\frac{1}{4}$  lb. 30c., 90c. per lb.

**Citron.** (Colorado Red Seeded.) Excellent for preserving, etc., almost transparent when prepared; finely flavored. Pkt. 5c., 10c. per oz.,  $\frac{1}{4}$  lb. 30c., 90c. per lb.

**Mountain Sweet.** Early, large, oblong shape, rind dark green; flesh red, solid and sweet. Pkt. 5c., 10c. per oz.,  $\frac{1}{4}$  lb. 30c., 90c. per lb.

**Sweet Heart.** Handsome oval shape, very large, green and mottled, solid, meaty and sweet. Pkt. 5c., 10c. per oz.,  $\frac{1}{4}$  lb. 30c., 90c. per lb.

*Musk Melon—Rockyford*

Moutarde (Fr.)

One ounce of seed will sow a drill about 75 feet long

This makes a delightful salad in its green form; the seed is also used for flavoring various things. Sow the seed in shallow drills about eight inches apart. It matures for use very quickly. As a winter salad it is also very desirable, as it can be sown in boxes or frames, and if well protected will keep well.

## NASTURTIUM (See also Page 70 for other varieties)

Nasturtiums besides being used for flowering purposes are used in the kitchen. The seed pods, which resemble capers if gathered while green, are most desirable for pickling. The leaves are good for mixing with green salads. Sow when there is no further danger of frost, in hills or drills about one inch deep at distances to suit.

## OKRA or GUMBO

Gombaud (Fr.)

One ounce of seed will sow about 20 feet; one lb. to 300 feet

The green pods are extensively used in soups and stews, to which they add considerable zest; they are also very nutritious. Sow the seed in well fertilized ground, after the frost and cold is thoroughly out of the ground, in rows about three feet apart; drop the seed at distances of several inches apart, and thin out to allow development when growing to about six inches.

**Dwarf Green, Improved.** A very desirable sort, immensely productive, bearing very long pods well filled. Pkt. 5c., 10c. per oz.,  $\frac{1}{4}$  lb. 20c., 60c. per lb.

**Perkins' Long Pod (Improved Strain).** A wonderful dwarf type, setting pods when only a foot high. It can be planted somewhat earlier than other sorts and consequently matures sooner. The pods are exceedingly long and tender. Pkt. 5c., 10c. per oz.,  $\frac{1}{4}$  lb. 30c., 80c. per lb.

**White Creole or Velvet.** The pods of this variety are very free from ridges; they are light green and tender. Pkt. 5c., 10c. per oz.,  $\frac{1}{4}$  lb. 20c., 60c. per lb.

**ONION**

Ognon (Fr.)

**One ounce of seed for 100 feet of row; for sets 50 lbs. to the acre**

For sets, sow the seed as early as possible in the spring, very thickly in drills. As soon as the tops die off in summer, remove them to a dry airy place; and early in the following spring, replant them by placing sets in shallow drills twelve inches apart and about three inches apart in the drills. They may also be grown to full size during the first season by sowing the seed thinly in drills one foot apart. In March or early in April thin them out to stand three or four inches apart in the drills.

**GARDEN PEAS**

Peas were an extremely short crop last season and prices are some higher.

**Sow one quart of seed to 100 feet of row; one and one-half bushels to the acre in drills.**

Peas succeed best in light, dry loamy soil. Early and dwarf sorts require richer soil than the late varieties. If manure is used, let it be old and well rotted, or there will be a rank growth of vines with few pods. Sow the early, smooth, round sorts as early in the spring as the ground can be worked. Seeds of wrinkled varieties are more liable to rot if the ground is cold, and must be planted later. Sow in single rows, dwarf sorts three feet apart, and tall sorts four feet, or in double drills, six to eight inches apart, one inch apart in the drill, and not less than four inches deep, for late sorts five to six inches deep. Deep planting prevents mildew.

The ears are all carefully tipped and butted before being shelled. **Plant 10 quarts per acre in hills, or three bushels per acre broadcast.**

## FANCY RECLEANED CLOVER SEEDS

In clovers we do not attempt to offer low-priced seed. These are usually adulterated and otherwise spurious. We aim to supply one quality, and that is the best obtainable. Our farm seed trade doubles almost every year, a fact which forces us to conclude that it pays to offer only the best.

**Alfalfa** (*Utah Grown Seed*). This grade of Alfalfa is far superior to the ordinary western grade. It is more vigorous in growth, and the seed has greater vitality. Sow  $\frac{1}{2}$  bushel per acre in May or during August and early September, top dress it with manure every fall, and it will rarely winter kill. It can be cut usually three times in one season. 22c. per lb., per pk. \$2.75, \$11.00 per bu. Ask for our New Pamphlet on Alfalfa, mailed free.

Sow from June 1st to July at the rate of one bushel (48 lbs.) per acre broadcast. Price: 15c. per qt.; per pk., 50c.; \$1.50 per bu.

**Silver Hull.** Some growers prefer this to the above variety, claiming it will do well in most any climate, especially on poor soil. The grain is of a silvery-gray color and is smaller than the Japanese. Price: 15c. per qt.; per pk., 50c.; \$1.50 per bu.

**BEANS (Early Soja)**

**Early Evergreen.** The fodder grows to be 6 to 7 feet high, producing an elegant brush of fine, straight quality. Sow 6 to 8 qts. per acre in May and June. Price: 15c. per qt.; 4 qts., 40c.; 75c. per pk.; \$2.50 per bu.

**BARLEY**

**Manshury (Six-Rowed).** Sow from June to July at the rate of 2 to 2½ bu. per acre broadcast (48 lbs.) Price: 15c. per qt.; pk., 50c.; \$1.75 per bu.

**MILLET**

Millet is a most excellent emergency crop where hay has proved a failure. It may be sown as late as July 20th with good results.

**German or Golden (Tennessee).** This makes fine hay, producing large, heavy heads of seed. It grows about 4 feet in height, coming in a little later than the Hungarian. Sow one bu. (48 lbs.) to the acre any time during spring after April 10th to July 20th. Price: 15c. per qt.; per pk., 50c.; \$1.70 per bu.

**Hungarian.** The quality of hay produced here is somewhat coarser in texture than from the above sort; height 2 to 3 feet. Sow one bu. (48 lbs.) per acre at the same periods as above. Price: 15c. per qt.; per pk., 40c.; \$1.50 per bu.

**Japanese Barnyard.** This is best of all the millets, growing from 6 to 8 feet high, producing fodder of finest quality. Sow from May 10th to June 10th, 12 lbs. per acre. *A Head of Japanese Millet*

**NOTE.**—Common Millet is offered and sold by many dealers as German Millet. The seed bears sufficient resemblance to German Millet to deceive inexperienced purchasers, and to make the prices asked by other houses for the true German Millet seem unreasonable. Do not buy German Millet without the full assurance that it is Tennessee or southern-grown seed.

*Fancy Welcome Seed Oats***FANCY SEED OATS**

**FLAX SEED**

It grows from 4 to 5 feet high, and is a tremendous producer of seed. Price: 10c. per qt.; per pk., 45c.; \$1.50 per bu. (56 lbs.).

**A WORD ABOUT GOOD FARM SEEDS**

It is frequently an objective point in buying an article to buy the lowest priced. In farm seeds this does not pay. The margins of profit are extremely small at their best, and no reputable merchant will ask higher prices than his costs warrant. However, do not look at price when buying farm seeds; look for quality. Results are what count, and these can be had from any farm seeds we sell.

# FARM SEEDS—(Continued)

### NITROGEN-GATHERING BACTERIA

The thought that nitrogen-gathering bacteria does assist leguminous plants, such as clover, peas, beans, etc., in making rapid, vigorous growth is no longer mere talk. Many exhaustive experiments have been carried on and it has been proven, beyond a doubt, that they are of great value.

We cannot urge too strongly their general use, on account of the many excellent reports that have been made to us.

We offer the two best cultures on the market.

### NITRO-CULTURE

**What Nitro-Culture Is.**—Nitro-Culture consists of nitrogen-collecting bacteria which work in the soil and on the roots of leguminous plants, having the power to collect free nitrogen from the air and supply it to the plants. All plants need nitrogen, which is very costly obtained otherwise.

**Alfalfa.**—By means of inoculation with Nitro-Culture, Alfalfa is now being successfully grown from the Atlantic to the Pacific and from Canada to the Gulf.

Always say when ordering for what crop Nitro-Culture is desired

**Special Garden Size for the Following Varieties of Seed only:**

SWEET PEAS, 25 CTS.	GARDEN BEANS, 25 CTS.

**Full and explicit Directions accompany every Package**

Nitro-Culture cannot be furnished for any crops like corn, wheat, potatoes, cotton, etc., but only those which are mentioned opposite. Inoculated clover may be planted with oats or other crops, and there is reason to believe that they will be benefited.

"ALWAYS SOW" MICHELL'S EVERGREEN GRASS SEED

# MICHELL'S FLOWER SEEDS

Our Flower Seeds have a *reputation* for their *superior quality* and for the *excellent results* obtained by sowing them. It is our constant aim to supply only such *Varieties* and *Strains* that will give the *best of satisfaction*.

Throughout the following pages of Flower Seeds the different varieties are designated as Annuals, Biennials, Perennials, etc., and for the benefit of those who are not familiar with these terms, we wish to make the following brief explanation.

**Annuals.** These grow and bloom, mature their seed and then die in the same year, such as Asters, Balsams, Poppies, Sweet Peas, Morning Glories, etc.

**Biennials.** These live for two years and then die, most of them blooming the first year, such as Campanula, Dianthus, etc.

A beautiful frilled or crested type, producing very large single flowers. The above illustration, which was made from an actual bloom, will convey some idea of its beauty. Every one who grows Tuberous Begonias should plant some of this variety. We offer large bulbs in mixed colors.

20c. each, per doz. \$2.00, \$15.00 per 100.

**BEGONIAS (B.) (Tuberous rooted)**

These bulbs can be used for spring bedding as well as for early flowering indoors. They cover a wide range of colors as given below. The flower makes a beautiful contrast with the dark green foliage. Begonias are not hardy, and cannot be left outdoors during winter. They delight in a moist shaded place.

Fancy Leaved Caladium

**CALADIUM ESCULENTUM (B.) (Elephant's Ear)**

As centre pieces or specimens in flower beds Caladiums answer well. They also make an excellent edging for a hardy bed of grass, for Ricinus and other tall growing plants. When planted in a bed alone, a border of Scarlet Sage removes the one color effect and makes a beautiful contrast. Do not plant caladiums outdoors until after May 1st, but to get them in early growth, they may be started in doors.

## DAHLIAS

Dahlias need little description on account of their great popularity. To keep the bulbs from year to year, they should be lifted from the ground after the first frosts and stored in a cellar (not too dry) where the temperature remains about 40°. The clumps may be divided and planted out the following year in the month of May.

### SPECIAL NOTICE

To obtain best results and large flowers from Dahlias it is advisable to take off many of the buds especially early in the season and also later when the plant is in flower.

As the season advances, our stock of some varieties in roots becomes exhausted; in such instances, strong young plants will be sent, which will bloom equally as satisfactory the first season.

**Mrs. Roosevelt.** This Dahlia without exception is the finest ever offered in any class. It is large, full, and perfectly formed; the illustration will convey a partial idea of its grandeur. The color is an exquisite light pink, turning paler—almost white—toward the centre. It is a free bloomer and should be in every garden. Price, strong roots, 35c. each, 3 for \$1.00, \$3.75 per doz.

There is nothing that produces such a wealth of bloom during the early summer as these.

Plant them early in April or the latter part of March if ground is open.

## SELECT LIST OF CLIMBING PLANTS AND SHRUBBERY

Climbing vines are as necessary to the comfort and beauty of a home as the trees and shrubs we plant about it. They mature quickly and tone down the stiff, bold angles of new buildings, and give shade and flowers over the porches and trellises. They are cheerful and cooling in climbing over bowers and summer-houses, and wild and natural in running over trees and stumps. Vines are strong, robust growers that require little attention other than to occasionally train them. *Perennial sorts are marked P. Annual sorts, which must be planted every year, are marked A.*

## PLANET JR. CULTIVATORS.

The Planet Jr. Horse Hoe is probably as well known as any cultivating implement that has ever been made. Its merits are such that from the very beginning it was recognized as a valuable addition to implements used for the cultivation of the soil, and it is now sold all over the world.

From the very beginning, the makers have improved wherever it seemed possible, but never have allowed the quality of the goods to depreciate. No inducement of increased profit has ever caused them to swerve from the determination to offer as good a tool each year as they have ever made before, or else a better one. This we believe has been true for every successive year that they have been manufacturing, and we can assure our readers and patrons that they intend this to be perpetual. We ask you to study carefully if you are interested in tools of this kind, and write us fully when you are in doubt what to buy.

The No. 8 Planet Jr. Horse Hoe is one of the most up-to-date and efficient implements offered to the farmer and gardener. It is made of steel throughout, that is, frame and teeth, and all other parts are equivalent as to wearing qualities. The lever wheel and depth regulator enable the operator to increase or lessen the depth of tilling by the mere stroke of the arm which operates lever. The side or covering steels and shovel which is in the rear may be taken off and the arms so turned that when the extra teeth, which accompany the machine, are attached, it presents a perfect five-tooth cultivator.

No. 6—Fig. 71, "Iron Age" Horse Hoe as a Cultivator, shown with "Furrow-closing" Attachment

No. 6—Fig. 71. Seven Tooth Iron Age Cultivator

The above illustration represents the most perfect agricultural appliance of its kind. By means of the lever wheel the depth may be regulated with a single stroke of the arm; the expanding lever renders it able to go through very narrow rows successfully, leaving the ground in fine condition ready for planting. The cultivator may also be used as a five tooth machine by merely unbolting two teeth and arms.

The Iron Age Implements are regarded in many sections of farming and trucking the universal favorite. Too much stress cannot be laid on them as efficient and economical implements. No. 6—Fig. 100. Iron Age Horse Hoe and Cultivator

Fig. 100—No. 6 "Iron Age" Horse Hoe and Cultivator, with Plain Wheel

No. 1—Fig. 64. Iron Age Horse Hoe and Cultivator, Complete

This represents the tool that has been carrying for years the fame of the "IRON AGE" far and wide. There is scarcely conceivable a portion of the tillable earth where it has not

been in use, or a cultivated product of the ground which it has not helped to produce. This tool is somewhat lighter than No. 6, and for this reason is still preferred by some. The frame is not so high, and consequently it is necessary to make use of a separate pair of cultivator standards when wishing to convert it into a plain cultivator. All the "IRON AGE" attachments, with the exception of the Furrow-Closing and Depth Regulator, are applicable to this admirable and well-known tool. Price, \$6.25

This harrow is a tool that has, since its introduction, seemed to go "right to the spot" among farmers over the whole land. It is extensively used in cultivating Sugar Beets. The teeth are diamond shape, with a small cultivator tooth forged on one end—steel, of course. For very close work, every other tooth can be quickly removed.

In common with all good things, this tool has numerous inferior imitations, but for solid quality, design or finish, is not approached by

them. Cultivating width when equipped with lever expander, 34 inches; with plain expander in place of lever expander, 38 inches.

**NO. 4 PLANET JR.****COMBINED HILL AND DRILL SEEDER, WHEEL HOE,  
CULTIVATOR AND PLOW**

This is the most popular combined tool made. It combines in a single implement a first-class hill-dropping seeder, a single Wheel Hoe or weeder, a cultivator and a plow. The hopper holds 2 quarts of seed, which can be sown in continuous rows, or dropped in hills at 4, 6, 8, 12 or 24 inches apart.

The drill is detached and the tool frame substituted by removing but one bolt. It then becomes a single wheel hoe. It is useful almost every day in the season, at every stage of the garden work. With this one implement the small farmer can do practically all the work in his small crops. See price at top of opposite side of this page.

**No. 3 PLANET JR. DRILL**

as described opposite.

Price . . . . . \$10.00

15-inch steel driving wheel. Holds 3 quarts.

Weight, packed, 46 lbs.

A favorite among onion growers, market and private gardeners.

**No. 14 PLANET JR.  
DOUBLE WHEEL DISC HOE, CULTIVATOR AND PLOW**

This is a new tool for 1909, which will give excellent satisfaction. The discs are also adjustable for depth and to throw to or from the row as desired.

The set of prong cultivator teeth is constructed on entirely new lines, and will be found invaluable in general cultivation. The tooth next to the row is narrow and is arranged to run shallow, the middle tooth is wider and runs  $\frac{1}{2}$  inch deeper, while the outside tooth is very much wider and runs  $\frac{1}{2}$  inch deeper still, so that the work is finer and more delicate next to the row, to avoid injury to the roots of plants, and deeper in the center. The teeth are also set out of line from front to back, which makes them work with greater freedom.

The plows are the regular **Planet Jr.** model and are continually valuable for furrowing and covering, for plowing away and plowing back as required.

Steel Driving Wheel. Weight, packed, 47 lbs.

Holds  $2\frac{1}{2}$  quarts.

Equipment:

One pair of 4½-inch hoes.  
Three cultivator teeth.  
One garden plow.  
One leaf guard.

**No. 3 PLANET JR.****HILL AND DRILL SEEDER**

This Seeder is the latest and most perfect development of the hand seed drill. It sows evenly in drills, and also drops in hills at 4, 6, 8, 12 or 24 inches apart. It is thrown out of gear instantly by moving a convenient lever, or the flow of seed is stopped by pushing down the feed rod. No time is lost, no seed is wasted. It is quickly set to sow the different kinds of seeds in the exact thickness required.

The accurate hill-dropping drill, which gives a regular stand of plants with the least seed, saves its cost over and over again in seed alone. We guarantee this drill to be accurate and give satisfaction in every respect.

**No. 38 PLANET JR.****SINGLE WHEEL DISC HOE, CULTIVATOR AND PLOW**

This new tool is a combination occupying the same position among Single Wheel Hoes as that taken by the No. 14 **Planet Jr.** Double Wheel Disc Hoe among Doubles. The sets of Discs and Cultivator Teeth are the same as furnished with No. 14 Disc Hoe, and the Plow is identical with that furnished with our Single Wheel Hoe.

Price, complete, as in cut, \$6.50.

# IRON AGE DRILLS AND SEED SOWERS

## THE MODEL SEED DRILL

Though one of the older types of seeding devices, it is to-day as popular as any of the newer ones. The frame work is substantially made of wood, and every part works perfect. It is designed as a drill seeder only; the depth of sowing can be regulated to any desired distance. It is well named the market gardeners' drill, having a large carriage capacity for seeds, and is a wonderfully efficient machine.

**Advance Drill**

### "ADVANCE" FERTILIZER DRILL

Packed Weight, 46 Pounds

The increased use of commercial fertilizers has fairly compelled the farmer and planter of the present day to provide himself with improved appliances for properly and economically distributing these adjuncts of modern farming.

We claim the "Advance" to be the best low-priced distributor on the market, and would call attention to its distributing disc of galvanized iron, which can neither break nor rust; also to the wrought iron wheel, which is light and strong.

A shut-off, to prevent the escape of fertilizer when wheeling around end of row, is a late improvement; being one of those little things which go far, however, in making a tool valuable.

A first-class tool for the drilling of peas and corn.

No. 5 Prairie State Brooder

## PRAIRIE STATE BROODERS

Prairie State Brooders represent the latest achievement in this line of appliances. They save the lives of many chicks which if entrusted to the care of other brooders would often perish.

The Prairie State Universal Hover is a special feature which can be purchased separately and used in connection with brood and colony houses. The lamp is left on the outside of the house, the warm air passing through a pipe into the hover, and circulating the warm air on the inside top of the hover; thence it is diffused through the hanging felt, and insures perfect ventilation as well as the impossibility of crowding. It will successfully rear 100 to 125 chicks until they are three or four weeks old.

THE UNIVERSAL HOVER

The name implies correctly what the Hover is. It can be attached to any old box, piano case or a brooder you may be using at the present time. Just the thing for one who wants the least expensive but at the same time most efficient brooding device. For equipping large or commercial poultry plants these will be found invaluable.

*Whitewashing and  
Painting Machine*

# AUTO-SPRAY No. 3-B

A Perfect General Purpose Sprayer

Fully Guaranteed

---

Henry F. Michell Co.

1018 Market Street

Philadelphia, Pa.

**T**HE NECESSITY of improved methods for applying whitewash and cold water paint is apparent to everyone interested, but until recently the old method of applying with a brush was the only one known. We are now able to offer you in the **AUTO-SPRAY No. 3-B** a practical machine for this purpose, and at a low price.

¶ By the use of this machine the work of whitewashing is made simple and easy, and can not only be done faster but much better than with a brush. The high pressure which the pump generates forces the whitewash or paint into all cracks and crevices where it is impossible to reach with a brush. No matter how much or how little of this work you have to do, you cannot afford to be without this sprayer, for the saving made in labor and material will more than cover the cost of the machine. You will have no need of a brush, pails, ladders, or other tools of the painter's kit, and the efficient and rapid manner in which it will do the work will surprise you.

¶ While the Auto-Spray No. 3-B is designed especially for a whitewashing and painting machine, it is also perfectly adapted to spraying all kinds of trees, plants, shrubs, vines, etc., and will be of the greatest value for Stock and Poultry Farms, Nurserymen and Florists, Fruit Growers, Cold Storage Plants, Factories, Packing houses, Warehouses, etc. In fact, any and every place which requires the application of disinfectants, insecticides, fungicides, whitewash, or cold water paint.

¶ The Auto-Spray No. 3-B produces the greatest power, and with the use of the extension pipe the tallest fruit trees can easily be sprayed.

¶ The cost of the Auto-Spray No. 3-B as compared with other and more expensive machines is no indication of inferiority.

- ¶ It is of the simplest mechanical design possible, without any complicated parts to get out of order and cause trouble.
- ¶ Nothing but the very best material is used in the construction of this machine. It is made by thoroughly skilled mechanics and is a high-grade machine in every respect.
- ¶ We have confidence in our machines and know that they will perform the work required of them.
- ¶ The reservoir is made of heavy galvanized steel and holds eight gallons of solution.
- ¶ It is of a size most convenient for handling, being easily carried from place to place when filled, by means of the handles at sides, or it may be mounted upon any wheelbarrow, cart, or wagon.
- ¶ This will prove much more satisfactory than a large tank or barrel mounted upon wheels, as it can readily be carried to any scaffolding, up-stairs, and in numerous places where it would be impossible to take the bulkier machines.
- ¶ The reservoir to the Auto-Spray No. 3-B has a flat base, and when placed upon any even surface it will give a firm foundation for pumping which is impossible to secure with any machine mounted upon wheels.
- ¶ The cover is reinforced and so designed that the pump can easily be removed, thus exposing all working parts, making it easy to keep clean or to make repairs should they be necessary.
- ¶ The pump is made entirely of **heavy brass**, except the handle parts, making it non-corrosive and practically indestructible.
- ¶ All brass connections, stop-cock, nozzle, etc., are turned out of **SOLID BRASS** on a turret lathe with full thread, and not stamped from thin metal with spun threads.
- ¶ The handle parts are patterned to give the greatest ease in operating, but little exertion being necessary to produce sufficient force for spraying.

¶ There is an agitator near the bottom of pump which is worked automatically by the handle, and keeps the solution thoroughly mixed about the suction opening.

## **ALL VALVES ARE EASILY CLEANED.**

**THE PLUNGER IS SIMPLE AND EFFECTIVE**  
being easily adjusted to take up all wear.

¶ This machine is fitted with the latest pattern of Vermorel nozzle, which is easily cleaned and is without question the best nozzle for this purpose.

¶ The nozzle cap is fitted with a steel insert which does not allow the nozzle aperture to wear as fast as brass. Also five extra inserts are furnished with each nozzle, and they may be replaced as often as necessary, to keep the spray of uniform size.

¶ The **simplicity of construction, ease of operation** and **convenience** of this machine, together with its **mechanical perfection and durability**, make it without question the **ONLY PRACTICAL AND SATISFACTORY** whitewashing and painting machine for general use manufactured.

¶ It will cover any surface with whitewash or paint more rapidly and thoroughly than five men with brushes.

¶ Full directions for using the Auto-Spray No. 3-B, also for preparing and mixing whitewash and cold water paint, will accompany each machine.

¶ This machine is furnished complete with eight feet of the best 3-ply discharge hose, stop-cock, two 4-foot lengths of iron extension pipe, and the latest pattern of Vermorel nozzle.

## What is "Climax Lawn Sand"?

---

A unique combination of carefully dried and finely ground chemicals, which if sprinkled over the grass possesses the remarkable property of destroying Moss, Chickweed, Plantains, Dandelions and all other weeds on Lawns, Tennis Courts, Golf Greens etc., at the same time promoting the growth of the finer grasses to such an extent that the spaces previously occupied by the disfiguring weeds are quickly covered by a perfect sward of fine close-growing grass, of good color, which will retain its freshness under adverse conditions of continuous use and drought. Over five thousand American users during the past season have proved to their entire satisfaction that it is so.

When this article was first offered to the American Public we received hundreds of inquiries. How is it possible for any preparation to destroy weeds and not the grass? The explanation is as follows:

The chemicals used in "Climax Lawn Sand" are of such a nature, that they will readily destroy any plant to which they can adhere: Weeds as a rule have broad hairy leaves or grow in mattings so that powder can easily remain on the plants for several hours, while the grasses are smooth and finebladed and do not accept the sand as adherence.

## When to Apply

**SEASON:** "Climax Lawn Sand" may be applied any time during the growing season of the year, namely from beginning of April to the end of October.

**CONDITIONS OF THE LAWN:** The lawn must be absolutely dry; by that is meant that no rain or dew must be visible on the grass.

**TIME OF DAY:** Ten to twelve a. m. during the months of April, May and October, nine to twelve a. m. during June, July, August and September.

**WEATHER:** Only apply in fine weather when the temperature is fairly high and when no rain appears likely for a day or two. This is most important.

## How to Apply

For shallow rooted close-cropped weeds such as Moss, Chickweeds or Daisies sprinkle "Climax Lawn Sand" all over each patch, so as to lightly cover them with slight dusting, distributing evenly about five ounces for every square yard. Gauge the quantity according to the number of weeds. Repeat the application if any escape the first dressing. For all flat-leaved, shallow rooting weeds such as Plantains, Thistles etc., a larger quantity is required and we recommend that a small teaspoonful should be placed on the crown of each plant.

**DANDELIONS** and other deep rooting plants with tap roots are the most plentiful and also the most troublesome to deal with. We recommend roughly slicing off the crown and putting a large teaspoonful on the wound. The plant will break out again lower down when this treatment should be repeated. The top root will then decay and the dandelion will never trouble you again. Only in rare instances is a third application necessary.

"Please note our offer of "Climax Weed Killer" for prompt and effective destruction of Dandelions."

# The Effect

of an application is visible within a very few hours; the weeds blacken and die; the grass may become pale, but it quickly recovers its color, and young growths appear on the bare spots previously occupied by the weeds.

"Climax Lawn Sand" combined with dry heat absorbs promptly every particle of sap contained in the foliage of a plant to which it can stick long enough and thereby kills it; on the other hand, just as soon as it combines with moisture and is carried to the roots of grasses the destructive qualities changes into a very productive one, as it acts as a most powerful fertilizer and produces the most vivid green on grass that has ever been seen. For this reason it is essential that should the weather be very hot and dry, the lawn should be thoroughly watered on the expiration of 48 hours after the application.

## Fertilizing Qualities

Where "Climax Lawn Sand" is used no other manure is required. It acts as one of the most powerful fertilizers for grasses if applied as a top dressing in the early spring, and produces a green which cannot be equalled with any other chemical. Many of our friends who have used "Climax Lawn Sand" as a destroyer of weeds solely, were so pleased with its fertilizing qualities that they desire to use it in future as a manure in preference to well known preparations. For top dressing  $\frac{1}{4}$  ton is required per acre.

### QUANTITY REQUIRED AS A DESTROYER

Can of	3 1-2 lbs.	will dress	150 square feet
" "	7	" "	250 "
" "	14	" "	500 "
" "	28	" "	1000 "
" "	56	" "	2000 "
" "	112	" "	4000 "

If the weeds are but few in a space, the above quantities will cover correspondingly larger areas. "Climax Lawn Sand" is no more an unknown quality but has been extensively tried with splendid success all over the United States and Canada.

## TESTIMONIALS

Southport, June 8, 1908.

Gentlemen:

I have great pleasure in testifying to the satisfactory results obtained from the use of your "Climax Lawn Sand," in a plot of grass in our park, which was heavily covered with all kinds of weeds. This plot was dressed with your "Lawn Sand" and in a matter of three weeks, a most marvelous result was shown: Not a single weed was to be found on the plot, only a rich dark grass, of quite a different green, to that on parts which had not been dressed with the preparation, showing the Sand to be also a strong fertilizer. The plot in question is on public view and has been since the experiment was started, so that I can safely recommend the "Climax Lawn Sand" as a thorough Weed Destroyer and Fertilizer and I wish you all the success with it that it deserves.

Yours respectfully,  
Signed, WALLACE SHUTTLEWORTH.

We have used up the keg of "Lawn Sand" and it seems to be doing the work well. Kindly send me immediately two more kegs.

In regard to the "Climax Lawn Sand," which the writer tried last year, we wish to say that it gives extremely satisfactory results. On a portion of my lawn, in front of the porch, I had considerable plantain leaves, which, after an application of "Lawn Sand," disappeared entirely and did not seem to appear again this year. It is highly satisfactory.

Truly yours,  
PAUL F. RICHTER,  
Philadelphia, Pa.

## "TARGET BRAND" WEED KILLER

The disposition of weeds has always been to the person having this end of the gardening in hand a source of continual worry and work—"Target Brand" Weed Killer has removed entirely this dread. We offer a most effective solution of high-grade chemicals, combined by secret process. The dilution is 1 to 50 parts of water, so easily made that a boy or child can attend to it.

After careful experimenting along lines which have been to make the best article of this kind, we can recommend with entire confidence a remedy that not only reduces the amount of labor, but does it at about one-tenth the cost. A gallon diluted is sufficient to cover a space of 100 to 150 square yards.

Application is best made with a watering can to insure uniform distribution, the most advisable time being after a rain, which is when weeds start to sprout and grow. "Target Brand" Weed Killer effectively destroys the roots as well as the top growth, and single applications last almost an entire season.

At the low price which it is sold for, no Estate Manager, Cemetery or Park Superintendent can afford to be without it.
